## St Just and Pendeen Neighbourhood Development Plan

Preliminary data
After eliminating a small number of surveys as blank or spoilt we had returned 994 completed.
This represented 1974 persons.
The age demographic was as follows

| U15 | 173 | $8.76 \%$ |
| :--- | :--- | :--- |
| $15-24$ | 123 | $6.23 \%$ |
| $25-34$ | 88 | $4.46 \%$ |

316 of the 1974 people are in single occupancy dwellings
89 of the 261 (34\%) in the 75+ age group live alone.
The largest group 920 (46\%) live in households of 2.

Of the 994 responses 958 declared the household as their main residence.

## Reading the data

The marking of the questions was in the range -2 to +2 as follows :-
-2 Strongly disagree
-1 disagree
0 Neither agree nor disagree
1 agree
2 strongly agree
For questions where there was a numeric response e.g. distance travelled the responses were used as is.

For each question the data is shown in 4 ways

## The score

At a glance the score shows the level of support for a statement. If all respondents strongly agreed then the score would be 1988 if all strongly disagreed -1988. Scores in the high hundreds show significant support or otherwise for a given statement

## The numbers of respondents in each category

The table of results reports the actual number of respondents in each category.

## The percentage

This expresses the numbers of respondents as a percentage of the total.

## The bar chart

This is a very powerful visual aid to the show the support or otherwise of a particular statement. The horizontal axis is from -2 on the left to +2 on the right.
A bar chart heavily weighted to the right shows strong agreement whereas one weighted to the left strong dissent. Eamples
